Semarang, Jawa Tengah, 50254, Indonesia

As a Fullstack Web & Mobile Developer, I build scalable, secure, and production-ready systems. I have hands-on experience with Laravel, React, Next.js, and more.

Professional Experience

Internship - Control and Instrumentation Maintenance   Jun, 2021
PT. Indonesia Power | Semarang, Indonesia

Assisted technicians with maintenance and calibration tasks while meeting daily targets and working in a team.

Internship - Technician   Oct - Dec, 2021
PT. Telkom Akses | Semarang, Indonesia

Managed warehouse materials and supported the troubleshooting team in handling customer reports.

Work - Technician   Jun - Dec, 2022
PT. Sima Agustus | Jakarta, Indonesia
Repaired videotron modules and coordinated with technicians to prepare materials for client events.

Projects

Flexy – Ticketing Management   Sep 2024 - Jan 2025

Mobile application for managing ticket and product sales, with a user-friendly interface and real-time transaction tracking. I serve as a Frontend Developer responsible for the application's interface.
- Development of mobile applications with Flutter to provide a responsive user experience.
- The backend is developed using Laravel to run business logic and provide an efficient API.
- The relational database is managed with MySQL

Online Exam Application   2025

A web-based application for managing online exams, equipped with user roles for admins and instructors, as well as real-time monitoring. I serve as a Full Stack Developer responsible for the frontend and backend logic of the application.
- Development of web-based applications with Inertia.js and Tailwind CSS, which provide a responsive user experience
- The backend is developed using Laravel to run the business model and provide an efficient API.
- The relational database is managed with MySQL

Finari - Crowdfunding App   2025

A mobile crowdfunding application that makes investing simple and safe, allowing anyone to support projects and grow their capital. I serve as a Frontend Developer responsible for the application's appearance.

- Development of mobile applications with Flutter to provide a responsive user experience.
- The backend is developed using Laravel to run business logic and provide an efficient API.
- The relational database is managed with MySQL.
